PROFESSIONAL SUMMARY

Full Stack Developer with strong expertise in building scalable, AI-integrated web applications using React, TypeScript, Flask, and Firebase. Proficient in Data Structures, Algorithms, and REST API development, with hands-on experience in NLP and machine learning models. Passionate about developing intelligent, real-world solutions and continuously learning emerging technologies.

WORK EXPERIENCE

AI & ML Virtual Internship

Aug 2025 – Oct 2025

Infosys Springboard

- Developed AI-Based system to analyze and extract financial data from unstructured documents using NLP.
- Implemented named entity recognition (SpaCy) to identify key financial entities, including amounts and dates.
- Integrated LLM-based extraction (LangExtract) to produce structured outputs in various formats.
- Designed document highlighting features to enhance visibility of critical financial information.

AI with Python Internship

Jun 2024 – Jul 2024

Coincent

- Constructed and optimized Vision Transformer (ViT) models for image classification utilizing self-attention mechanisms.
- Fine-tuned pre-trained models, enhancing performance on custom datasets.
- Applied data augmentation and hyperparameter tuning to increase model accuracy and robustness.
- Benchmarked performance against traditional CNN architectures to validate effectiveness.

EDUCATION

B.E. - Computer Science and Engineering (AI & ML), CGPA: 8.99

Sep 2023 – Jun 2027

VSB Engineering College, Karur

Higher Secondary Education (HSC), Percentage: 91.83

Jun 2022 – Apr 2023

Kongu Matriculation Higher Secondary School

Secondary Education (SSLC), Percentage: 100

Jun 2020 – Mar 2021

Kongu Matriculation Higher Secondary School

PROJECTS

AI Finance Insight

Tech Stack: React, TypeScript, Python, spaCy, Hugging Face

- Built an AI-powered system to analyze financial documents and extract structured insights automatically.
- Implemented transformer-based NLP models for accurate financial entity recognition and data parsing.
- Designed a responsive React frontend to visualize extracted financial data effectively.

Vision Transformer Image Classifier

Tech Stack: Python, PyTorch, TensorFlow

- Implemented Vision Transformer (ViT) architecture for high-accuracy image classification tasks.
- Optimized model training using GPU acceleration to improve performance and efficiency.
- Built a scalable pipeline for preprocessing, training, and evaluating deep learning models.

Emergency-Triggered Microloan Button

Tech Stack: MIT App Inventor, Flask, Firebase

- Developed a full-stack application enabling users to request instant emergency microloans.
- Designed and implemented RESTful APIs for secure authentication and loan processing workflows.
- Integrated Firebase for real-time database management and seamless backend communication.

KEY ACHIEVEMENTS

- **Semi-Finalist - ATOMQUEST'25, Atomberg**
- Certificate of Achievement for outstanding performance in a national-level innovation challenge.

CERTIFICATIONS

- Generative AI Fluency – NASSCOM FutureSkills Prime
- Introduction to IoT and Digital Transformation – NASSCOM FutureSkills Prime
- Programming in Java – NPTEL
- Introduction to Large Language Models – Google Cloud

ACADEMIC ACTIVITIES

- Presented a technical paper at VIHANSA Symposium, Sri Ramakrishna Institute of Technology.

SKILLS

Programming Languages: Python, Java, TypeScript, Go

Frontend: React.js, HTML, CSS

Backend: Flask, REST APIs

Database & Cloud: Firebase, MySQL

Tools: Git, GitHub

Core Concepts: Data Structures and Algorithms, Object-Oriented Programming, Database Management Systems, AI & ML Model Training, API Integration, Problem Solving
